ENERGY SYSTEMS FOR SUSTAINABILITY GREEN POWER AND FUELS PRODUCTION Fuels are at the heart of the sustainability initiative. In 2015, the world consumed:

- 31 trillion barrels of petroleum, mostly for transportation
- 9 billion tons of coal and 120 trillion cubic feet of natural gas, mostly for power generation.

ENERGY SYSTEMS FOR SUSTAINABILITY

the power sector The world's economies, whether emerging or developed, depend on the availability of reliable low cost power. The power sector is navigating a series of changing market forces such as the competition between low cost gas and renewable sources of energy. There are two main challenges facing the power industry:
