**Planter Parts**  
This planter unit position is extremely important because this angle affects the depth of the couler, the pressure of the closing wheels, and the angle of the seed tube. A planter unit with the back higher than the front is the biggest cause for seed on top of the ground or not being in moisture at a proper uniform depth.

For 1760 and 1760NT Wing-Fold Planters that are operating less fertilizer, or would require more frame weight for tough soil conditions, additional weight can be added to the center frame. A mounting bracket and six weights add approximately 600 pounds to the planter. This weight prevents the frame from flexing up in the center when planting.
