The period is mostly determined by the length of the pendulum. The period increases as the pendulum gets longer, and decreases as it gets shorter. Therefore, making the pendulum shorter will speed up the clock. Correct Answer: C. She could shorten the length of the pendulum. Changing the mass of the bob has no effect on the pendulum period.

The Period of a Pendulum Gizmo™ allows you to explore the factors that control how quickly a pendulum swings back and forth. To begin, practice measuring the period of the pendulum. On tGizmo, check that all variables are set to their original values:  $m = 0.5 \text{ kg}$ ,  $L = 2.0 \text{ m}$ ,  $g = 9.8 \text{ m/s}^2$ , and  $\theta = 20^\circ$ .

Experiment: Use the Gizmo to find the effect of each variable on the pendulum. Make sure that each experiment is controlled—only the variable you are testing should be changed. If the variable is mass, then the length and starting angle should be the same in each test. Record all results on separate sheets of paper or in your science notebook.
