### **Screening Guideline Overview**

Cancer Screening Guidelines Overview and Processes. The American Cancer Society has issued cancer screening guidelines since 1980. ACS processes and recommendations for the early detection of specific cancer types have evolved with new scientific data, as new screening technologies became available, and as standards for creating guidelines changed. The guidelines published in 1980 were based on a review of the evidence led by Dr. David Eddy, an early pioneer in evidence-based medicine.

Individuals and clinicians can use the annual Pap test screening visit as an opportunity to discuss other health problems and preventive measures. Individuals, clinicians, and health systems should seek effective ways to facilitate the receipt of recommended preventive services at intervals that are beneficial to the patient. Efforts also should be made to ensure that individuals are able to seek care for additional health concerns as they present.

Two kinds of tests are available for COVID-19: viral tests and antibody tests. A viral test tells you if you have a current infection. An antibody test might tell you if you had a past infection. An antibody test might not show if you have a current infection because it can take 1–3 weeks after infection for your body to make antibodies.
