Muscular Brian Caviness

Philip McComas Alan 2005

Skeletal muscle is one of three major muscle types, the others being cardiac muscle and smooth muscle. It is a form of striated muscle tissue which is under the voluntary control of the somatic nervous system. Most skeletal muscles are attached to bones by bundles of collagen fibers known as tendons.. A skeletal muscle refers to multiple

The muscle system is responsible for movement of the human body, posture, movement of substances inside the body and for the generation of body heat.

There are approximately 700 known and named muscles and on top of that, muscle tissue is also found inside of the heart, digestive organs, and blood vessels.
