Skiving And Roller Burnishing Sandvik

Fair Lawn, N.J. – Sandvik Coromant has introduced a new range of skiving and roller burnishing tools that allow manufacturers to finish cylinder bores in machine times of up to 90 per cent less than conventional honing techniques. Thanks to enhanced process security, faster cycle times are achieved without any detriment to extremely accurate finished tube diameters.

Skiving and Roller Burnishing Tool Faster Than Honing

Power skiving needs more productive tools. Sandvik Coromant offers indexable tooling for roughing and solid carbide/solid high-speed steel (HSS) for finishing. The indexable tooling makes it possible to increase productivity and minimize the use of the solid tool for finishing. This also means that re-sharpening of the finishing tool is minimized.

Power skiving for greater productivity - Sandvik Coromant

Roller burnishing, a cold-working process, uses multiple rollers to compress the peaks of material left behind after skiving to generate an extremely smooth surface finish. Burnishing also
