The Evolution of Man, vol 2 by Ernst Haeckel - Free eBook

Man evolved from some unknown mammalian ancestor and reached the pinnacle of evolutionary fabric. Man is placed under the family Hominidae of the order Primate and differs from other anthropoid apes by having: Large size of brain with greater functional ability (Maximum in Gorilla = 650 c.c., Minimum in Man = 1000 c.c.)

The Origin and Evolution of Man | Biology

Throughout human evolution, the brain has continued to expand.Estimated average brain masses of A. afarensis (435 grams [0.96 pound]), A. garhi (445 grams [0.98 pound]), A. africanus (450 grams [0.99 pound]), P. boisei (515 grams [1.13 pounds]), and P. robustus (525 grams [1.16 pounds]) are close to those of chimpanzees (395 grams [0.87 pound]) and gorillas (490 grams [1.08 pounds]).

Human evolution - Increasing brain size | Britannica

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus Homo—and leading to the emergence of Homo sapiens as a distinct species of the hominid family, which includes the great apes. This process involved the gradual development of traits such as human bipedalism and language ...

Human evolution - Wikipedia

Illustration. The illustration is part of a section of text and images commissioned by Time-Life Books for the Early Man volume (1965) of the Life Nature Library, by F. Clark Howell.. The illustration is a foldout entitled "The Road to Homo Sapiens". It shows a sequence of figures, drawn by natural history painter and muralist Rudolph Zallinger (1919-1995).

March of Progress - Wikipedia

Darwin never claimed, as some of his Victorian contemporaries insisted he had, that "man was descended from the apes," and modern scientists would view such a statement as a useless simplification—just as they would dismiss any popular notions that a certain extinct species is the "missing link" between humans and the apes. There is ...
