Three Phase Pv Inverter Topologies

We introduce an all-new family of tailor-made modules for photovoltaic (PV) string and multi-string inverters. For solar applications where a 3-level topology is of interest, Easy offers a full portfolio of 3-level configurations up to 200+ kW power level. Solutions are available for single-phase and three-phase photovoltaic inverters.

Three-phase three-wire inverter topology In Fig. 1(a) a three-phase three-wire inverter topology is depicted. Due to the lack of a fourth wire, this topology is less interesting for a low-voltage distribution network which is typically a four-wire system. A fourth wire can be added by connecting the three-wire inverter to a 4/Y

At any time of period, three thyristors (one thyristor from each phase) are in conduction mode. The shape of phase voltage is three stepped waveforms and shape of line voltage is a quasi-square wave as shown in the figure. $V_{ab} = V_{a0} - V_{b0}$ $V_{bc} = V_{b0} - V_{c0}$ $V_{ca} = V_{c0} - V_{a0}$
