Cushing syndrome may be caused by an adrenal cancer or an adrenal adenoma that makes high levels of cortisol and/or related hormones, but it can also have other causes. For example, benign pituitary gland tumors can make high levels of another hormone called adrenocorticotrophic hormone (ACTH). This is often called Cushing disease.

Signs and Symptoms of Adrenal Cancers and Adrenal Tumors

Adrenal cancer forms when something creates changes (mutations) in the DNA of an adrenal gland cell. A cell's DNA contains the instructions that tell a cell what to do. The mutations can tell the cell to multiply uncontrollably and to continue living when healthy cells would die.
